

TRANSISTOR

2N1632

Germanium p-n-p type used in radio-frequency amplifier applications in battery-operated AM portable radio receivers. In an unneutralized rf amplifier circuit, this type can provide a power gain of 25.6 db

at 1.5 megacycles. JEDEC No. TO-1 package; outline 4, Outlines Section. This type is electrically identical with type 2N1631.
