

Marconi KT41

(replaces N41)

Output Tetrode

Marconi KT41 is a high slope output valve giving a large output for a very small grid swing.

Nominal rating, see curve.

Inter-electrode capacities.

G-A	$1.3\mu\mu F$
A-E	$11.3\mu\mu F$
G-E	$21.0\mu\mu F$

Dimensions : 145×56.5 mm. 7 pin base ; for connections see pages 4-5.

Typical Operating Data.

Single Valve, Class A.

Anode voltage	250	250	250
Screen voltage	200	225	250
Grid bias	-3.5	-4.0	-4.4
Anode current	32	35	40 mA
Screen current	6.5	7.5	8.5 mA
Power output	3.2	3.5	4.3 watts
Optimum load	8,500	7,500	6,000 ohms
Bias resistance	90	90	90 ohms

Two Valves, Class AB₁.

Anode voltage	250
Screen voltage	250
Anode current, per pair	56 mA, no signal	60 mA, full drive
Screen current, per pair	12 mA, no signal	20 mA, full drive
Power output	8.6 watts
Optimum load	10,000 ohms
Common bias resistance	90 ohms

Notes.

Grid and anode stoppers of 10,000 and 100 ohms are recommended. The total resistance in the grid-cathode path should not exceed 0.5 megohm and full automatic bias should always be used. Owing to its high sensitivity this valve is particularly suitable for negative feed-back circuits.
